

Disaster Relief Proposal

Mandra Lions Club

At present diarrhoea, dysentery, fever with cold and cough badly affected to children. They are staying in a very very bad situation. They are going to government hospitals for treatment but due to its interior when they reached to hospital the staff closed the department and they came back to home. Who are able to reach in time they only give few quantity of medicine not full course from the department. Apart from the above and our experience on Malaria control measures since years it was badly need to protect the people from malaria.

Most of the tube wells are defunct. Though people have informed for many times no steps are taken. Actually tube wells are maintained from the block office at plain at Bagmundi and the team avoids maintaining the same due to distance and transport of spare parts. Villagers depend on the wells and DANRIs(local language small water collecting place in bank of a small river); some villages depend on spring and river water. But due to long rain all the wells and DANRIs have become dirty and the water is in transparent and muddy. But the villagers have no option other to use the same. Hesadih village is solely dependent on the river water.

Agriculture has got severely affected. All the winter cash crops, oil seeds and vegetables have died due to excessive rain.

All the earthen roads except asphalt roads are washed out and not capable for four wheelers. Only cycle ,motor bikes can move.

Now gradually they are returning to their normal living and going out for earning. Their first aim is to repair their housing. This year it is afraid to have a biting cold at the area for a long time due to late rain. In other years the temperature comes down to 1-3 degree Celsius for a long period. This year the situation may be worse. Almost all the 72 villages at Ayodhya hill have faced this mishap little less or more.

Under this situation need is many. But as an organization our capacity is limited. We have grouped the villages in two categories. Where we already have our non formal schools are kept at the first group. There are 15 villages in this category and near about 500+ to 600 families. Rest are in the other category. In the first category we have staff and volunteers at the village and at the other category we do not have only adjacent to projected villages.

At the first category we will Disinfect drinking water sources (wells/ DANRIs), Disinfect environment and surroundings, and provide Geoline liquid for family level drinking water safety. Halogen tablets though cheap are not available at the open market; and meant for government supply only. Diarrhoea awareness for the villagers will be carried on by our volunteers at the village.

For the second category, we will provide tarpaulin only to severely affected families and disinfect the drinking water sources.

Budget

TENTATIVE BUDGET BREAK UP FOR RELIEF COVERING DRINKING SOURCE AS WELL AS HUMAN HEALTH AFTER DISASTER DUE TO AFFECT ON PHILINE STORM WITH HEAVY RAIN

Sl. No.	Item	Numbers/ quantity/ units	Rate Rs.	Total Amount	Status	Justifications
1	Geoline for villages (1000 families @ 5 pcs per family)	5000	35	175000	Requested	Water purification tablets given to the families in the villages
2	Blitching for drinking water sources	250 drinking well points @ 2 times fortnightly	30	15000	Requested	Strong bleaching powder to clean water in the wells
